5.2. WHITE BALANCE

AWB : Color temperature is automatically adjusted to 3,000°K ~ 8,000°K

ATW : Color temperature is automatically adjusted to 1,900°K ~ 11,000°K

INDOOR : Color temperature is manually adjusted to indoor

OUTDOOR : Color temperature is manually adjusted to outdoor

MANUAL WB : Color Temperature is manually adjustable to adjusting value.
RED and BLUE gain can be changed for better pictures.

PUSH WB : Color Temperature is manually adjustable to adjusting value.

The One Push White Balance mode is a fixed white balance mode that may be automatically readjusted

only at One Push Trigger, while the camera is directed at a piece of white paper to obtain the optimum

state under current illumination.

One Push White Balance data is lost when the power is turned off. If the power is turned off, reset One Push White Balance.

5.3. EXPOSURE

MODE :

AUTO – Iris, gain and shutter can be controlled automatically.

MANUAL – Manual control of Iris, gain and shutter.

SHUTTER Priority – Manual control of shutter. Iris and gain can be controlled automatically.

IRIS Priority - Manual control of IRIS. Shutter and gain can be controlled automatically.

BRIGHT – Iris and gain can be controlled by control of brightness

SHUTTER :

Auto – Shutter controls exposure automatically when iris is manual.

Manual - Shutter is fixed, and gives the exposure control priority to other resources.

IRIS :

Auto - Iris controls exposure automatically, and shutter is fixed.

Manual - Iris is fixed, and gives the exposure control priority to other resources.

AGC LIMIT: To select maximum automatic gain limit.

Camera raises up gain to selected gain limit when dark conditions.

EXP COMP :

The exposure compensation function adjusts gain and iris, to keep a brightness level.

SENS UP :

Minimum slow shutter limit is down to 1/1 second.

The value means seconds.

Camera make Shutter speed longer to selected shutter limit when dark conditions.

FLICKERLESS :

This function used only for specific country to remove light flickering when light appears to flutter.

5.4. FOCUS

The camera employs a 30x optical zoom lens combined with a 12x digital zoom function. This camera

allows you to zoom up to 360×.

Optical 10x, f = 4.7 mm to 47 mm (F 1.6 to F 3.0)

Digital Zoom 12x : enlarges of the subject

7 levels of zoom speed

FOCUS MODE :

Auto mode automatically adjusts the focus position.

Manual mode adjusts the focus position by manual and when zoom is changed.

AF MODE :

Normal mode automatically adjusts the focus position.

Interval mode adjusts the focus position at time interval and when zoom is changed.

Zoom trig mode adjusts the focus position when zoom is changed.

ONE PUSH : When One Push AF command is sent, camera becomes Auto Focus mode to adjust focus

position for a while. After it stops, mode becomes that for Manual focus mode.

NEAR LIMIT : Priority for focusing distance. The lens moves to adjust the focus from the distance.

5.5. BACK LIGHT

BACKLIGHT : When background is too bright behind the object, the BLC make clearer object.

HLM - Highlight suppression reduce too bright light by masking it with specific color.

WDR : When background is too bright behind the object, the WDR make clearer images of the

background as well as the object. Wide dynamic range produce images that combining long-exposure

signals (normal shutter) with the signals of the high-intensity portions obtained with a short exposure

(high-speed shutter).

DWDR : Dark areas of image brightness correction.

DEFOG : This function affects the effect of fog removal. Furthermore, it improves visibility by

removing fog, clouds, smoke, and dust.

5.6. IMAGE CONTROL

COLOR LEVEL

Color level is the colorfulness of a color relative to its own brightness.

SHARPNESS

As you increase this value, the picture outline becomes stronger and clearer. Adjust this value

appropriately depending on the sharpness of the picture.

IMAGE FLIP

Video output is set horizontally vertically, and rotate.

DNR

2D/3DNR reduces video noises at low ambient light.

SHADING

Image center and the outskirts of brightness difference correction

GAMMA

Video out brightness correction function

COLOR SUPPRESS

Color suppress reduces color noise in low illumination conditions.

5.7. DISPLAY CONTROL

DAY / NIGHT

- **AUTO :** Auto day/night mode automatically switches between Color and Black/White depending on

  darkness. ICR(IR cut) filter is removed when it switches to black/white.

  D->N level – This level is threshold for switching day to night.

  N->D level – This level is threshold for switching night to day.

  Delay(Dwell) time - Checking time for condition of light to confirm changing to Color and Black/White.

  Color Burst – Color burst off makes that the color burst is removed when ICR switches to black/white.
- **DAY :** The camera keeps color mode constantly.
- **NIGHT :** The camera keeps black/white mode constantly.
